Where

DL - Dead load

LL - Live load

WLX, WLY - Wind load in X and Y direction

EQX, EQY,EQZ - Seismic load in X ,Y and Z direction.

RSX, RSY& RSZ - Spectrum loads in X,Y & Z direction.

TEMP - Temperature loads.

H. REINFORCEMENT STEEL:

- All reinforcement shall confirm to IS: 1786 – 2008 having minimum yield strength of 550 N/sq-mm.(Fe550)

I. STRUCTURAL STEEL

- All structural steel shall confirm to IS: 226 – 1975 with minimum yield strength of 250 N/sq.mm(Fe 250)

J. DEFLECTION LIMITS

For Reinforced concrete works:

- Limiting values of deflection (Short and Long term) as per **cl. 35.3and 23.2 of IS: 456-2000** is followed in the design.
- Limiting value for short term deflection is considered as span/250 and for the long term deflection is considered as span/350 or 20mm whichever less as per IS 456 – 2000.
- The vertical deflection limits may generally be assumed to be satisfied provided that the span to depth ratios is not greater than the values obtained as below:

  Continuous..... 26
  Simply Supported..... 20
  Cantilever..... 7

- As per IS1893 (Part1):2002, Story drift in any storey due to minimum specified design seismic lateral force shall not exceed 0.004 times the storey height.

K. CRACKING LIMITS

- Limiting values of crack width as per cl. 35.3 of IS: 456-2000 is followed in the design.
- In general for slabs and beams, the crack width is limited to 0.3mm.
- For water retaining structures, the water retaining portion of the structure will be designed as uncracked section.

F. FOUNDATION SYSTEM:

Foundation system of the structure is designed considering the recommendation from the Geotechnical report.

- The foundation system will be designed as raft foundation as per soil test report, and SBC considered is 600kN/sqm.
- Foundation system is designed by using CSI.SAFE.V 20.2 software.
