RAIN WATER CONSERVATION

* The following rain water conservation method should be made in the buildings.

* Percolation pits of 30centimeter diameter and 3 metres depth may be made and filled with broken bricks (or pebbles) for 2.85 metres and the top covered with perforated Reinforced Concrete Cement (R.C.C.) slab. These percolation pits may be made at intervals of 3 metres center to center along the plinth boundary. The rain water collected in the open terrace may be collected through a 150 millimetre PVC Poly Vinyl Chloride Pipe laid on the ground and may be allowed to fall in the percolation pits or into a open well through a seepage filter of 60cm x 60 cm (filter media broken bricks) provided before the open well which will improve the ground water level. A dwarf wall of 7.5 centimeter height is built across the entry and exit gates to retain water and allow it to percolate within.

our services doesn't just end there

Buying & Selling Services

Property Buying Assistance, Property Selling Support, Market Price Analysis, Owner Outreach and Negotiation.

Legal & Documentation Services

Certified EC, Patta, legal opinions, property verification, due diligence, litigation solutions, and legal heir certificates.
